good oil station management*

Maximize Oil Life with Good Oil Station Management

Frymaster is a filtration pioneer, as the first company that introduced built-in filtration, and continues its legacy as an industry-leading advocate of proper fry station management. Nothing maintains food quality and maximizes oil life better than routine filtration. The by-products created by high-heat frying take a toll on oil life unless a daily system of filtration and cleaning is in place. Frymaster's complete line of Frymaster and Dean brand filtration equipment, both built-in and portable, is designed to make filtration **quick, convenient, and reliable** for the operator. Numerous Frymaster and Dean brand options make it easy for you to incorporate a filtration process that best meets the needs of your operation.

An easy-to-operate, quick, and efficient filtration process encourages frequent filtering — a critical part of maximizing oil life, especially with trans fat-free oils.

Filtration

Extends oil life and saves you money

- Extends the useful cooking life of oil. Since oil is one of the most expensive food costs in an operation, a longer oil life reduces operating costs. This savings quickly offsets filtration equipment costs and continues to return savings to the bottom line.
- Offsets higher costs associated with trans fat-free oils. With consumer demand for healthier food choices, operators are increasingly shifting to trans fat-free oils.
- Maintains consistent food quality to ensure customer satisfaction.
- Eliminates oil contaminants, from micron-sized particles to solid food sediment, that compromise flavor profiles and reduce useful oil life.
- Makes cleaning fryers easier by preventing carbon deposit build-up.

Built-In Filtration

Puts filtration where it's most convenient to use – within the fryer battery

- Eliminates the need for additional floor and storage space.
- Encourages frequent filtering – a critical part of maximizing oil life and ensuring consistent food quality.
- Safeguards workers by minimizing handling of hot oil.
- All built-in filtration offerings:
 - Have a sloped drain pan for minimal post-filtering oil loss.
 - Have a 4 GPM pump with an 8 GPM pump option.
 - Are shipped with needed filtration accessories (sample paper and powder, clean-out rod, and filter brush).

- Maximizes oil life, reducing operating expenses
- Preserves food quality, assuring consistent, great-tasting food
- Makes filtering convenient with easy-to-use equipment
- Minimizes downtime with rapid, 3-5 minute filtration cycle

Portable Filtration

An economical filter option that does a premium job

- Filters 50 lbs. of oil in 5 minutes with 1/3 HP motor and powerful 4GPM steel gear pump.
- Returns filtered oil with ease. 5' oil hose amply reaches the frypot to wash down crumbs from walls and bottom plus returns the filtered oil.
- Stands up to heavy use with durable stainless steel pump housing and stainless steel pan, which is easy to clean.
- Includes needed filtration accessories (sample paper and powder).
- Reversible pump allows for the removal as well as the return of oil.

Two handle process makes built-in filtration easy
