DESIGN: Fully automatic, flight-type dish machine consisting of a load section, power recirculating prewash, power wash, and dual rinse/final rinse section. Included with each machine will be flexible plastic strip curtains to control overspray.

CONSTRUCTION: Stainless steel tank and chambers with No. 3 polish on appearance surfaces. Frame, legs and feet to be constructed of stainless steel. Inspection doors to be chamber width.

PUMPS: Recirculating stainless steel pumps with stainless steel impellers. Pump housing has easy to remove coverplate for access to impeller. Wash pumps are self-draining.

MOTORS: Totally enclosed fan cooled (TEFC) design with overload protection. Pump motors to be 3½ H.P. for prewash, 5 H.P. for power wash, and conveyor motor to be ⅓ H.P. Available in electrical specifications of 208/60/3, 240/60/3 and 480/60/3.

CONTROLS: A stainless steel control center with electronic digital controls mounted at eye level. Power "On/Off" and "Start/Stop" switches integrated into keypad. Digital display indicates door(s) open, low temperature alert, tanks/final rinse temperatures and other pertinent operating data. Additional "Start/Stop" switches are located at each end of machine. Conveyor speed button to be included on the control center to provide for the adjustable speed conveyor.

FLIGHT-TYPE CONVEYOR: Stainless steel side links, tie rods and conveyor tracks. Injection molded, resilient Duraflex flight links.

No other control system allows easier monitoring.

The digital controls are placed in a convenient panel that lets operators verify proper operation and temperatures at a glance. Digital display indicates the unit is on, and confirms that the doors are closed. Automatic door interlocks prevent the pump and conveyor from operating if the doors are open. Easy-to-read digital display indicates accurate temperatures of the 160°F wash, 160°F dual rinse and 180°F final rinse — critical for proper HACCP system record-keeping.

Stainless steel pump is built for long life.

The stainless steel pump housing and impeller offer greater durability and long life. The pump motor is totally enclosed and fan cooled (TEFC) to protect it from water spray during dishroom clean-up.

Scrap baskets capture food particles and are easy to clean.

The sloped screens that carry scraps to the scrap baskets are steeper, so less soil gets into the tanks. The basket opening is larger for easy cleaning and basket handles have been designed for easy lift-out access. The load section also features a removable scrap basket for ease of cleaning. All scrap baskets and strainers are stainless steel for strength and durability.

The FT1000 Series saves water and energy.

The unit has the lowest water and energy consumption in the industry, yet

provides effective cleaning and sanitizing that meets NSF International requirements.

This is achieved through a carefully balanced ratio of water flow to pressure. Insulated doors and thermal layered curtains also reduce heat loss. The unit's 58 gallons per hour rinse flow rate saves both water and the energy to heat it.

Wider, variable speed conveyor offers increased throughput.

The conveyor on the FT1000 Series is wider so it can handle more ware.

Result: more volume and versatility, quicker work. Its speed is service adjustable for the type of ware, soiled condition, or workforce requirements. It runs at 4 - 6.3 feet per minute.

Self-draining wash pumps help keep water clean.

Pumps are self-draining when the machine is shut down, so there is no residual water left in the pumps.

Installation is quick and easy with modular design, minimal wiring connections, and single point vent.

Modular design means the FT1000 installs quickly and reliably. The control panel is already in place, premounted to the dual rinse/final rinse section.

Wiring connections are minimal, and there is only a single vent, saving time and expense. The control box uses a "single plane" circuitry design for easy accessibility during installation and service. The FT1000 is ready to run quickly.
